I Answer the three of the following questions?

3) Ans: ADT $\rightarrow$ Abstract data type.

1) Ans: Data structure refers to the group of data elements which stores, processes, organises and retrieves when it is efficient.

4) Ans: Recursion is process of calling a function by itself directly or indirectly.

II List out the different types of Data structures.

(i) primitive data structure or Built Built-in.

(ii) non-primitive data structure or user defined.

Eg of primitive data structures are

(i) array integer

(ii) linked list float.

- (iii) char
- (iv) double

Eg of non-primitive data structures are

- (i) stacks
- (ii) Queue.

III) what is an Array? Discuss different operations on arrays.

Array : Array is an ordered list of homogeneous data elements which may be integer, floating point, char or double.

Operations on array are :

- (i) Create : Create operation results in reserving the memory for program elements.
- (ii) Sorting : Sorting operation results in arrangement of an elements within the data structures it may be either ascending or in descending.

(iii) Destroy : The destroy option results in the memory allocation within the specified data structure.

(iv) Merging : It is a set of elements on data structure with ^{an} other data structure.

(v) Searching : ~~is~~ The searching option results in the search of ~~is~~ to find the particular element ~~is~~ in the data structure. Searching is successful when the search is found. if it is not found it is unsuccessful.

(vi) Deletion : The deletion option results in deleting ~~a~~ a particular element within the data structure.
